Protect Your Family & Friends

Make Your Pool and Spa Safer with the Stingl SR-500

The Stingl SR-500 Reduces the Risk of Suction Entrapment Drowning

A Swimming Pool or Spa circulation system creates a suction force at the outlet where the water leaves the pool or spa (usually the main drain.)

The force of a pool's suction can be tremendous: 350 pounds of pressure for an 8-inch main drain with a standard pump. This "suction entrapment" will hold the bather in its grips until either the vacuum is broken, or he or she drowns, defying the rescue efforts of onlookers.

POOL & SPA NEWS March 27, 2006

The Stingl SR-500, a Safety Vacuum Release System (SVRS), has been designed to terminate pump operation in the event of a potential body or limb entrapment caused by suction entrapment. The Stingl SR-500 is now available for installation by your Swimming Pool and Spa Professional.

 **Stingl**
Pool Safety is our Top Priority

Shouldn't your existing pool and spa have this important safety device, a device now required on most newly constructed pools and spas?

Features & Benefits

Can Be Installed Quickly and Easily by Your Local Pool and Spa Professional

No Pipes to Cut or Glue

Works with All Existing Pool and Spa Pumps and Controllers

[Meets All Current Building Codes & Standards for New & Existing Pools and Spas](#)

Turns Pump Off in Milliseconds and Sounds an Audible Alarm

Provides an Additional Layer of Protection From Main Drain Entrapment
